Cookies

To make the site work properly, we sometimes place small data files called cookies on your device.

What are cookies?

A cookie is a small text file that a website saves on your computer or mobile device when you visit the site. It enables the website to remember your actions and preferences (such as login, language, font size and other display preferences) over a period of time, so you don't have to keep re-entering them whenever you come back to the site or browse from one page to another.

The European Union ePrivacy directive – more specifically Article 5(3) – requires prior informed consent for storage or access to information stored on a user's terminal equipment.

How do we use cookies?

We use two types of cookies:

Our site uses Google Analytics to help us to analyse how users use the site by providing number of visitors and other behaviour features – such as the average length of the stay on the site or the average of number of pages visited.

Also some videos embedded in our pages use a cookie to anonymously gather statistics on how you got there and what pages or videos you visited.

You can delete or block these cookies, but if you do that some features of this site may not work as intended.

How to control cookies

You can control and/or delete cookies as you wish – for details, see aboutcookies.org. You can delete all cookies that are already on your computer and you can set most browsers to prevent them from being placed. If you do this, however, you may have to manually adjust some preferences every time you visit a site and some services and functionalities may not work.
