

ANNUAL REPORT ON GEOTRACES ACTIVITIES IN GERMANY

Prepared by: Eric Achterberg

New scientific results

- Runoff from the Greenland Ice Sheet (GrIS) is thought to enhance marine productivity by adding bioessential iron and silicic acid to coastal waters.
- However, experimental data suggest nitrate is the main summertime growth-limiting resource in regions affected by meltwater around Greenland. While meltwater contains low nitrate concentrations, subglacial discharge plumes from marine-terminating glaciers entrain large quantities of nitrate from deep seawater.
- In the paper, we characterize the nitrate fluxes that arise from entrainment of seawater within these plumes using a subglacial discharge plume model. The upwelled flux from 12 marine-terminating glaciers is estimated to be >1000% of the total nitrate flux from GrIS discharge. This plume upwelling effect is highly sensitive to the glacier grounding line depth. For a majority of Greenland's marine-terminating glaciers nitrate fluxes will diminish as they retreat. This decline occurs even if discharge volume increases, resulting in a negative impact on nitrate availability and thus summertime marine productivity.

Completed Cruises

- **GEOTRACES Process Study GApr11**, GEOTRACES Process Study Meteor M147 to Amazon mouth (19/04/2018 - 21/05/2018)
- Chief-Scientist: Andrea Koschinsky (IUB Bremen). Other PIs Martin Frank, Martha Gledhill, Eric Achterberg (GEOMAR), Thorsten Dittmar (ICBM, Oldenburg). Brazilian partner institutes: Universidade Federal de Rio Grande do Sul-UFRGS, Universidade Estadual do Norte Fluminense-UENF, Universidade Federal de Santa Maria-UFSM, Universidade Federal de Rio de Janeiro-UFRJ.
- The aim of the cruise is to investigate interactions of trace metals, dissolved organic matter (DOM), and particles in the Amazon estuary and the associated plume as key processes for trace metal and DOM fluxes into the Atlantic.

Cruise report: https://doi.org/10.2312/cr_m147

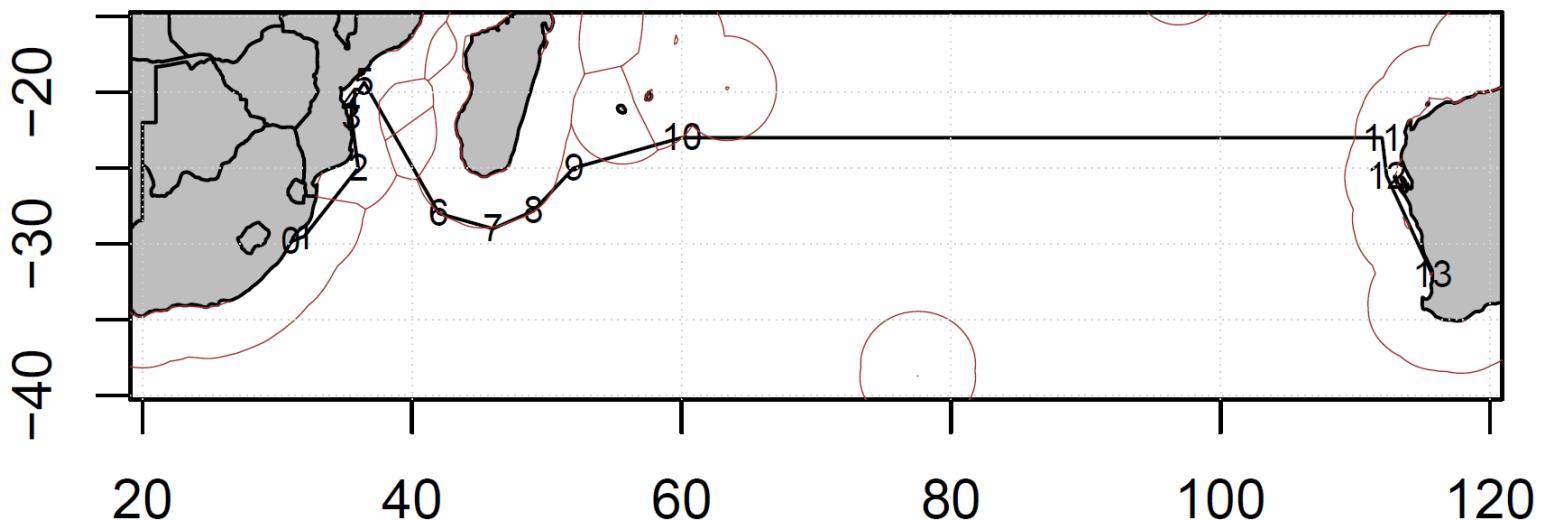

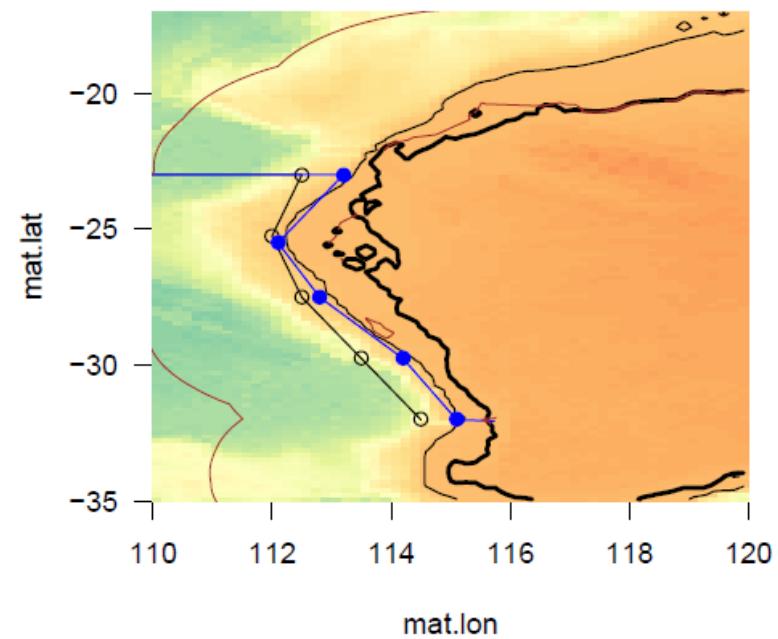

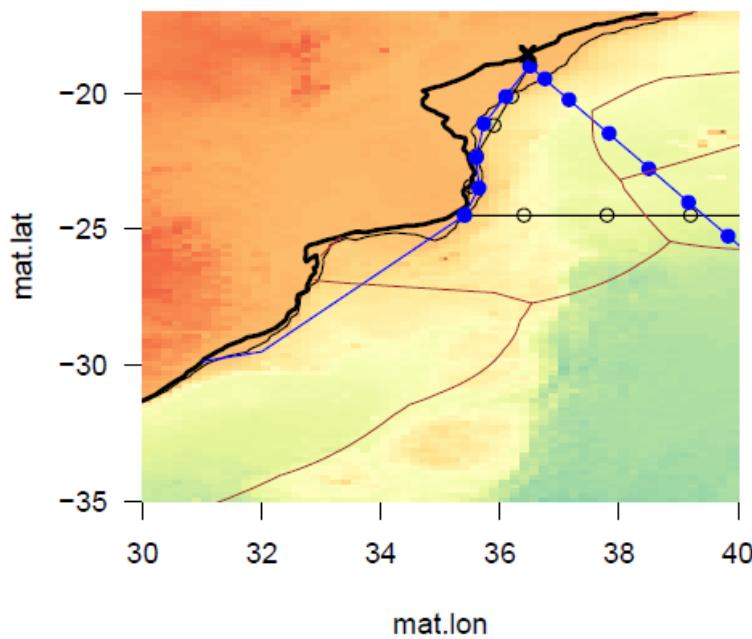

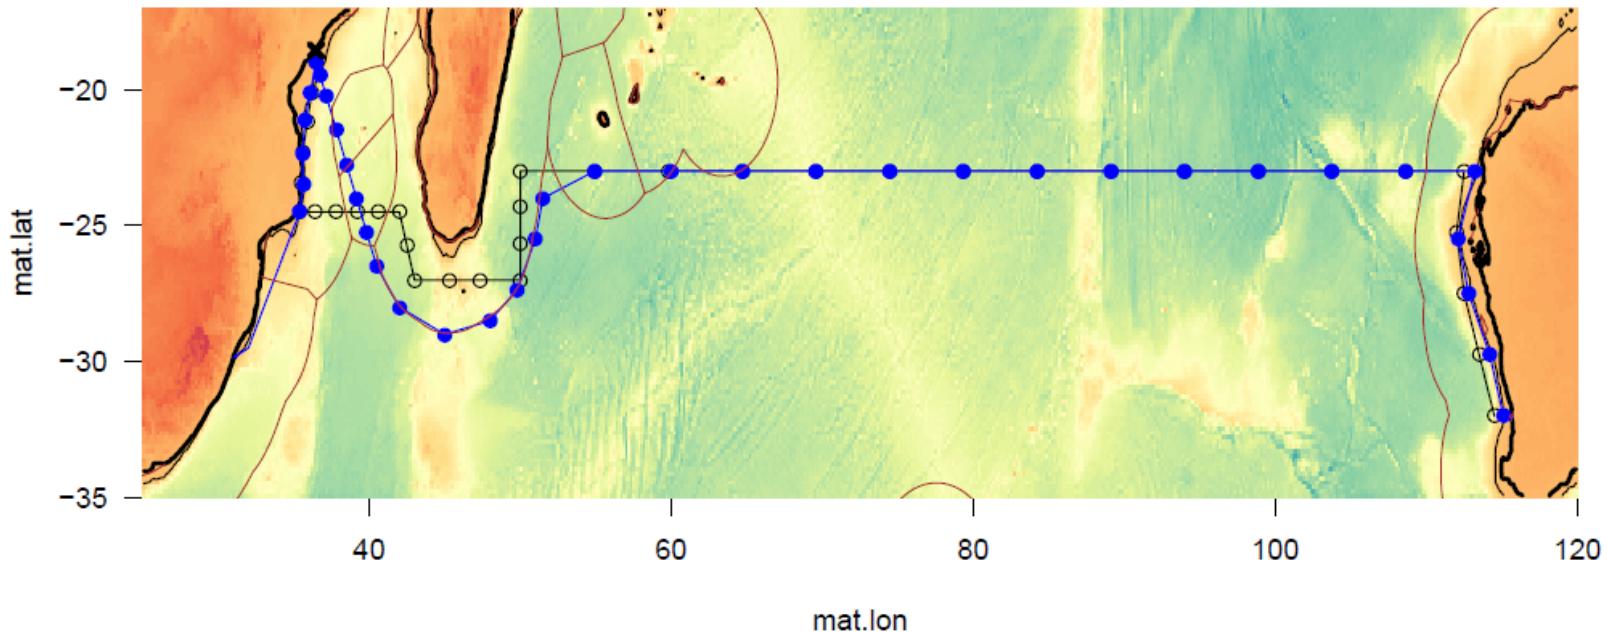

Surface and Deep Water Reference Material

- Deep water collected in the Angola Basin (Christmas 2015) is being re-bottled and will be re-distributed in the coming weeks to a number of labs to obtain initial batch precision and consensus values.
- Deep and surface waters collected in equatorial Atlantic in spring 2018. Stability and quality check on-going.
- We will collect surface Indian Ocean water in 2020 for bottling

Upcoming cruises

- South Indian Ocean cruise section cruise (GIO6, along 23°S).
- Scheduled for July-Aug 2020
- Focus on Mozambique shelf, Zambezi outflow (including time series of 1 year), Mozambique Channel, Madagascar Fe run-off, S Indian oligotrophic gyre, and Australian dust inputs
- PIs Achterberg, Frank,
Koschinsky

Cruise GP11 Equatorial Pacific Section FS Sonne Scheduled for July-Aug 2021

- Focus:
- Equatorial Undercurrent
- Hydrothermal signatures EPR and western eq Pacific
- Gradients in surface ocean biology linked to N, P, Fe and Co supply
- PIs Achterberg, Frank, Koschinsky

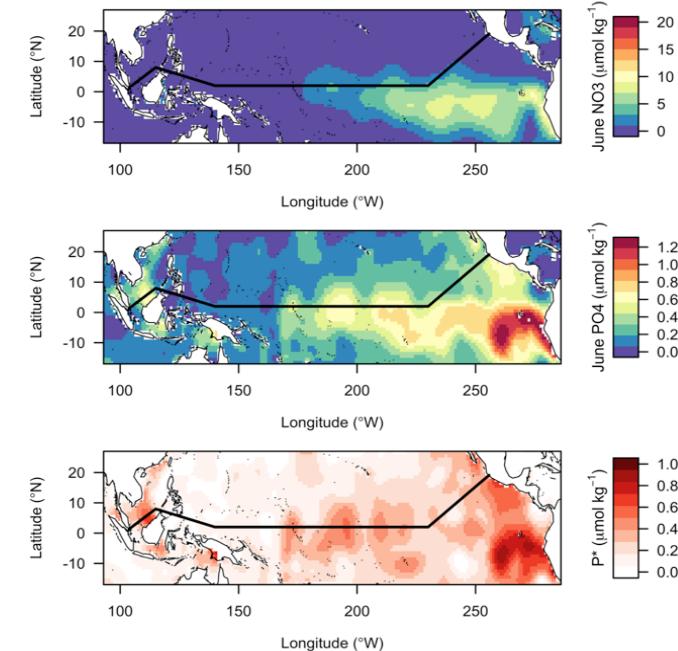

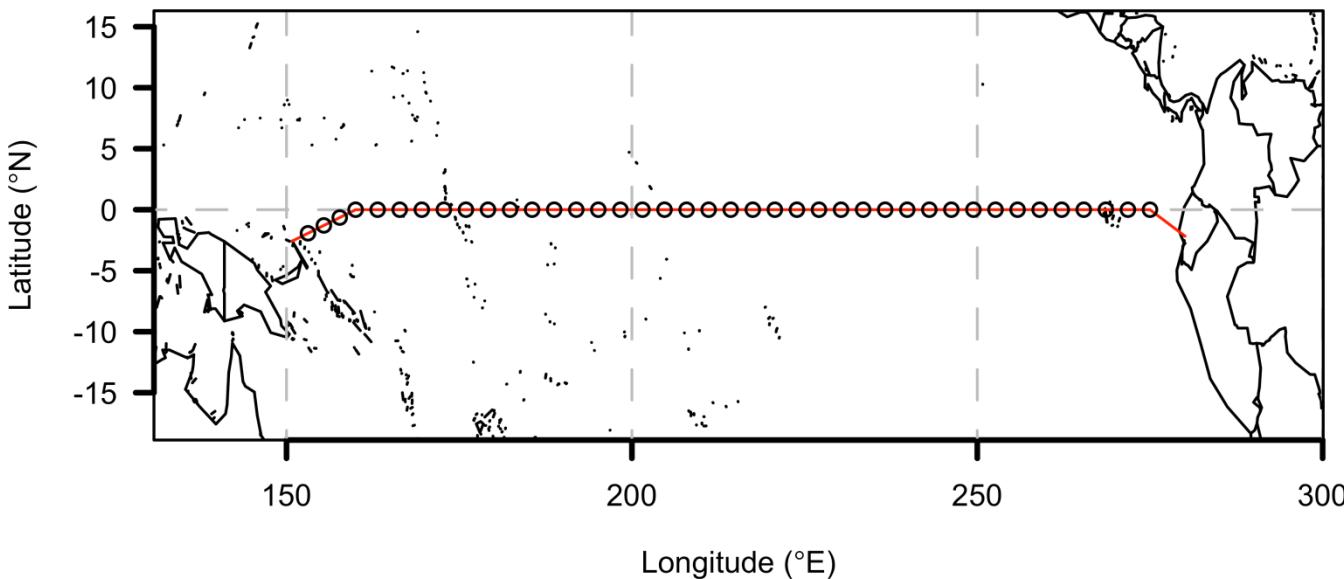

Figure. Climatological WOA surface nutrient distribution for June. (A) Nitrate (B) Phosphate (C) P* (=P-N/16).

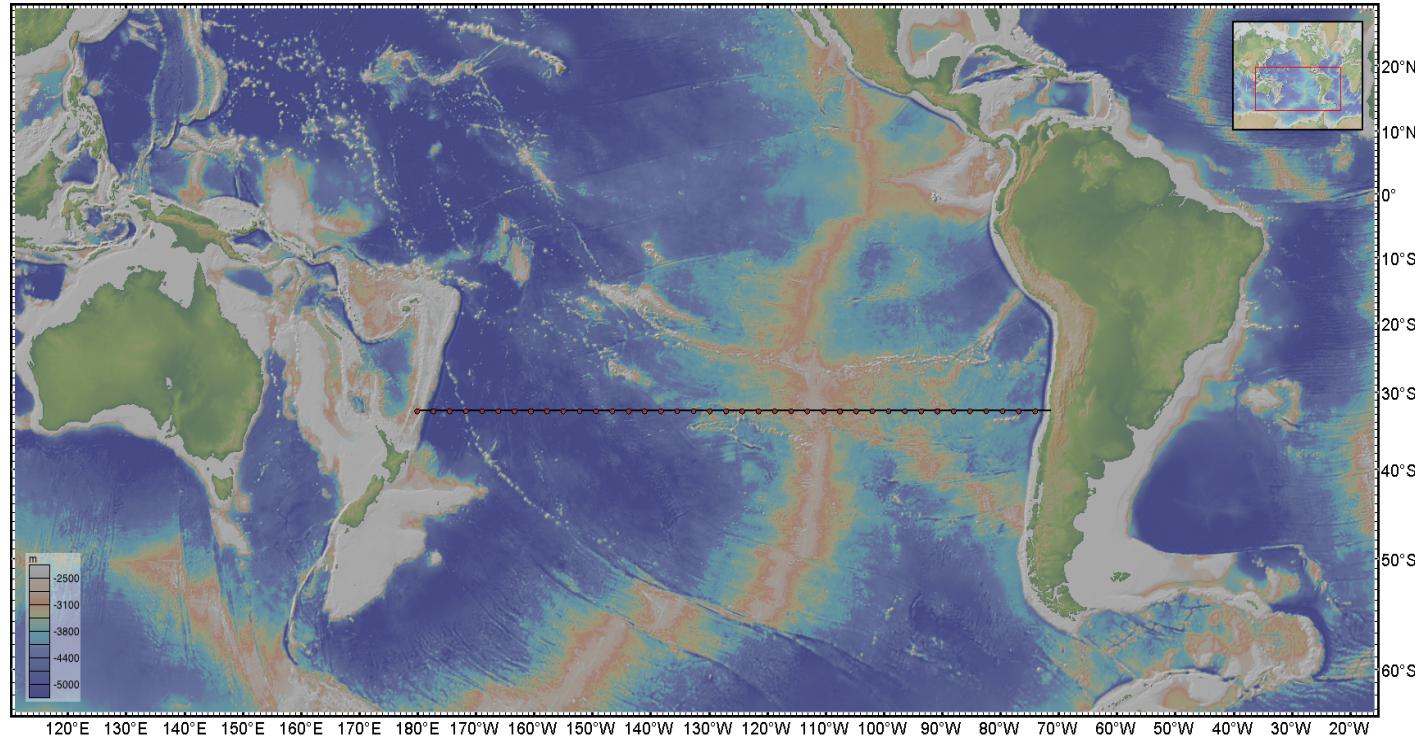

South Pacific Section GP21 Cruise

Scheduled for November 2021 – January 2022

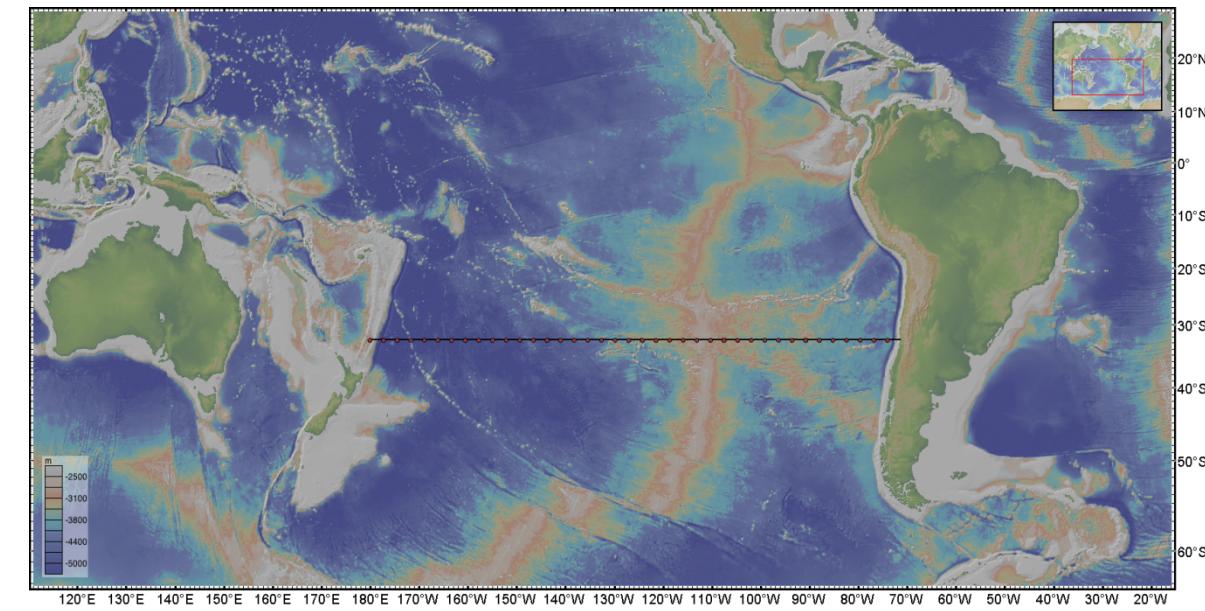

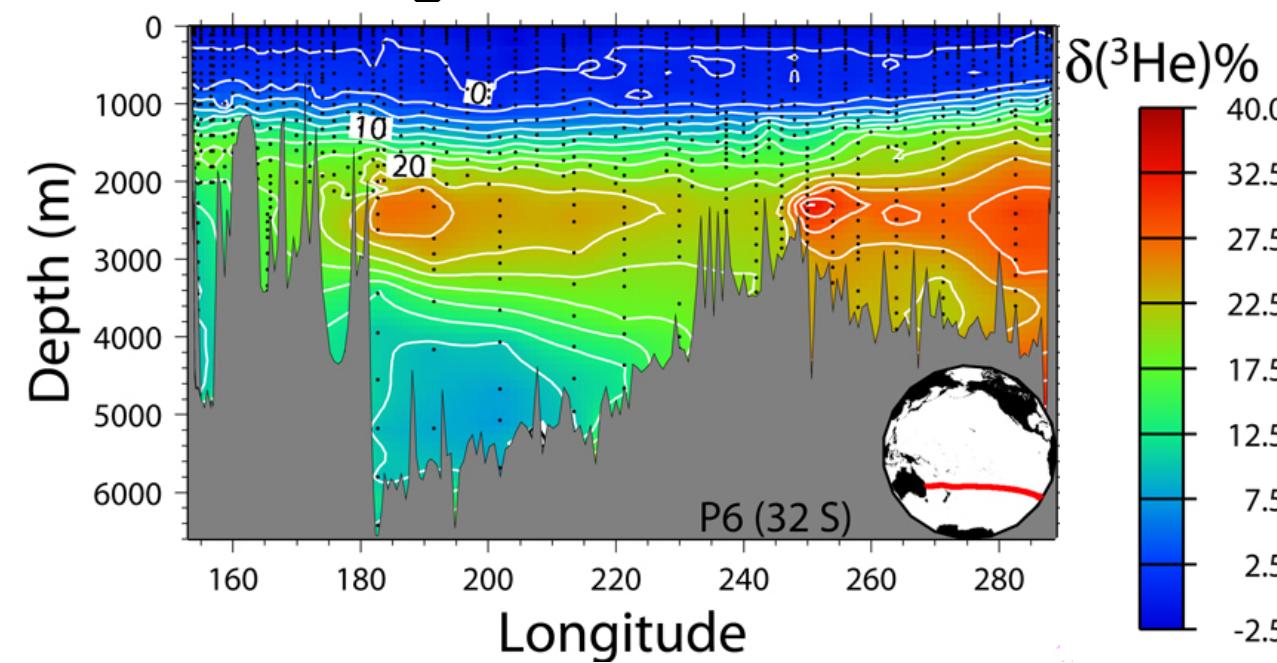

- Cruise proposal approved for South Pacific along 32.5 S
- Link up with GP13
- Cruise will be along WOCE line P6.

- PIs Achterberg, Frank,
Koschinsky
- Cross overs with GP13 & GP19

Cruise GP21 South Pacific Section

- Focus:
- Hydrothermal release of TEIs
- Hydrothermal flow of TEIs into Southern Ocean in Pacific Deep Water through the SE Pacific

GEOTRACES Polarstern Repeat Arctic Section

ArcWatch/TransArc3

- AWI: Walter Geibert et al.
- GEOMAR: Achterberg et al.
- Proposal submitted Sept 1, 2019
- Cruise is hoped to take place in 2022 or 2023
- GEOTRACES cruise request will be submitted soon
- Focus:
- Changes in Arctic Ocean since previous transect in 2007
- Changes in surface ocean TEIs related to enhanced river run-off
(i.e. Trans Polar Drift) and ice melt
- Hydrothermal release of TEIs
- Flow of TEIs into Atlantic Ocean through the Fram Strait
